

CATEGORY: Drilling & Abandonment TMT Transponder Stand

Engineered Tooling Solutions **FAST**

The TMT Beacon Transponder Stand is a subsea positioning tripod used to support a range of different transponders. It elevates the transponder unit above the sea floor, clear of potential obstacles and makes the stand easier to find.

The TMT Beacon Transponder Stand has been designed with a broad and sturdy footprint to inhibit movement and sinking into unstable surfaces. The TMT Beacon Transponder Stand also incorporates a clever folding system. The stand packs flat, taking up much less space for transport and / or storage.

TMT can configure the stand to the customer's requirements.

Features:

- Cost-effective
- Low maintenance
- Large and sturdy base for extra stability
- Hold a range of different transponder units
- Easy to find
- Folds flat for transport & storage
- Field proven
