

The TMT H4 Face Cleaner Scraper is a simple tool designed to scrape and clean a H4 wellhead. The tool uses copper as the scraper, due to the ductile nature of the material, to ensure that no damage is caused to the wellhead. The copper is attached to a T-bar handle to allow a range of ROV manipulators to operate the tool.

TMT can configure the tool to the customer's requirements.

Features:

- Cost-effective
- Low maintenance
- Easy to use
- Field proven
- Corrosion resistant materials
